A prescient warning of a future we now inhabit, where fake news stories and Internet conspiracy theories play to a disaffected American populace “ A glorious book . . . A spirited defense of science . . . From the first page to the last, this book is a manifesto for clear thought. ” —Los Angeles Times How can we make intelligent decisions about our increasingly technology-driven lives if we don ’ t understand the difference between the myths of pseudoscience and the testable hypotheses of science? Pulitzer Prize-winning

author and distinguished astronomer Carl Sagan argues that scientific thinking is critical not only to the pursuit of truth but to the very well-being of our democratic institutions. Casting a wide net through history and culture, Sagan examines and authoritatively debunks such celebrated fallacies of the past as witchcraft, faith healing, demons, and UFOs. And yet, disturbingly, in today's so-called information age, pseudoscience is burgeoning with stories of alien abduction, channeling past lives, and communal hallucinations commanding growing attention and respect. As Sagan demonstrates with lucid eloquence, the siren song of unreason is not just a cultural wrong turn but a dangerous plunge into darkness that threatens our most basic freedoms. Praise for *The Demon-Haunted World* “ Powerful . . . A stirring defense of informed rationality. . . Rich in surprising information and beautiful writing. ” —The Washington Post Book World “ Compelling. ” —USA Today “ A clear vision of what good science means and why it makes a difference. . . A testimonial to the power of science and a warning of the dangers of unrestrained credulity. ” —The Sciences “ Passionate. ” —San Francisco Examiner-Chronicle

Engaging science writing that bravely approaches a new frontier in medical science and offers a whole new way of looking at the deep kinship between animals and human beings. *Zoobiquity*: a species-spanning approach to medicine bringing doctors and veterinarians together to improve the health of all species and their habitats. In the tradition of Temple Grandin, Oliver Sacks, and Neil Shubin, this is a remarkable narrative science book arguing that animal and human commonality can be used to diagnose, treat, and ultimately heal human patients. Through case studies of various species--human and animal kind alike--the

authors reveal that a cross-species approach to medicine makes us not only better able to treat psychological and medical conditions but helps us understand our deep connection to other species with whom we share much more than just a planet. This revelatory book reaches across many disciplines--evolution, anthropology, sociology, biology, cutting-edge medicine and zoology--providing fascinating insights into the connection between animals and humans and what animals can teach us about the human body and mind.

A century ago Darwin and Wallace explained how evolution could have happened in terms of processes known to take place today. This book describes how their theory has been confirmed, but at the same time "transformed", by recent research.

Challenge your students to learn more about the scientific world around them. This packet contains activities designed to be completed in 15 minutes or less and can be used as lead-in exercises for classroom discussion, homework, or extra credit assignments. The activities help strengthen students' understanding of key scientific concepts and examine thought-provoking issues. New worlds are explored as students answer questions, complete Extra Challenges, and solve problems. This is a valuable tool that should be used in any science classroom!

Each chapter includes a review of key concepts, guided study questions, and section reviews that encourage students' active participation in the learning process; two practice tests and a challenge test help them assess their mastery of the material.
