What if you can't afford nine-dollar tomatoes? That was the question award-winning journalist Tracie McMillan couldn't escape as she watched the debate about America's meals unfold, one that urges us to pay food's true cost--which is to say, pay more. So in 2009 McMillan embarked on a groundbreaking undercover journey to see what it takes to eat well in America. For nearly a year, she worked, ate, and lived alongside the working poor to examine how Americans eat when price matters. From the fields of California, a Walmart produce aisle outside of Detroit, and the kitchen of a New York City Applebee's, McMillan takes us into the heart of America's meals. With startling intimacy she portrays the lives and food of Mexican garlic crews, Midwestern produce managers, and Caribbean line cooks, while also chronicling her own attempts to live and eat on meager wages. Along the way, she asked the questions still facing America a decade after the declaration of an obesity epidemic: Why do we eat the way we do? And how can we change it? To find out, McMillan goes beyond the food on her plate to examine the national priorities that put it there. With her absorbing blend of riveting narrative and formidable investigative reporting, McMillan takes us from dusty fields to clanging restaurant kitchens, linking her work to the quality of our meals--and always placing her observations in the context of America's approach not just to farms and kitchens but to wages and work. The surprising answers that McMillan found on her journey have profound implications for our food and agriculture, and also for how we see ourselves as a nation. Through stunning reportage, Tracie McMillan makes the simple case that--city or country, rich or poor--everyone wants good food. Fearlessly reported and beautifully written, The American Way of Eating goes beyond statistics and culture wars to deliver a book that is fiercely intelligent and compulsively readable. Talking about dinner will never be the same again.

In January 2004, President Bush announced a new space policy directed at human and robotic exploration of space. The National Academies released a report at the same time that independently addressed many of the issues contained in the new policy. In June, the President's Commission on Implementation of United States Space Exploration Policy issued a report recommending that NASA ask the National Research Council (NRC) to reevaluate space science priorities to take advantage of the exploration vision. Congress also directed the NRC to conduct a thorough review of the science NASA is proposing to undertake within the initiative. This report provides an initial response to those requests. It presents guiding principles for selecting science missions that enhance and support the exploration program. The report also presents findings and recommendations to help guide NASA's space exploration strategic planning activity. Separate NRC reviews will be carried out of strategic roadmaps that NASA is developing to implement the policy.
