with consumer theory and then discuss preferences and utility, budget constraints, the consumer's optimal choice, demand and the consumer's choices about labor and savings. They next turn to welfare economics: when is one policy better for society than another? Following are chapters presenting the theory of the firm and profit maximization in several alternative and partial equilibrium models of competitive markets, monopoly markets and duopoly markets. The authors then provide general equilibrium models of exchange and production and analyze market failures created by externalities, public goods and asymmetric information. Finally, they offer introductory treatments of decision theory

required at the intermediate level, from consumer and producer theory to market structure (perfect competition, monopoly and oligopoly). Topics covered include risk, game theory, general equilibrium and externalities, asymmetric information, and public goods. Using numerical examples as well as sophisticated and carefully designed exercises, the book aims to teach microeconomic theory via a process of learning-by-doing. When there is a skill to be acquired, a list of steps outlining the procedure is provided, followed by an example to illustrate how this procedure is carried out. Once the procedure has been learned, students will be able to solve similar problems and be well on their way to mastering the
