| <p>This pathfinding collection--by premier psychotherapists, thinkers, and eco-activists in the field--shows how the health of the planet is inextricably linked to the psychological health of humanity, individually and collectively. It is sure to become a definitive work for the ecopsychology movement. Forewords by Lester O. Brown and James Hillman.</p> |
| <p>The Wiley Blackwell Handbook of Transpersonal Psychology presents the most inclusive resource yet published on this topic - which seeks to benefit humanity by integrating ancient wisdom and modern knowledge. Features the work of more than fifty leading voices in the field, creating the most comprehensive survey of transpersonal psychology yet published Includes emerging and established perspectives Charts the breadth and diversity of the transpersonal landscape Covers topics including shamanism, neurobiology, holotropic states, transpersonal experiences, and more</p> |
| <p>Transformative learning involves experiencing a deep, structural shift in the basic premises of thought, feelings, and actions. It is a shift of consciousness that dramatically and permanently alters our way of being in the world. Such a shift involves our understanding of ourselves and our self-locations; our relationships with other humans and with the natural world; our understanding of relations of power in interlocking structures of class, race and gender; our body awarenesses; our visions of alternative approaches to living; and our sense of possibilities for social justice and peace and personal joy. The editors of this collection make several challenges to the existing field of transformative learning - the first is to theoreticians, who have attempted to describe the nature of transformative learning without regard to the content of transformative learning. The editors argue that transformative learning cannot be constructed in a content-neutral or context-free way. Their second challenge, which assumes the importance content for transformative learning, is to educators as practitioners. The editors argue that transformative learning requires new educational practices consistent with the content. Arts-based research and arts-based teaching/learning practices are one example of such new educational practices. Education for the soul, or spiritual practices such as meditation or modified martial arts or indigenous peoples' forms of teaching/learning, is another example. Each article in the collection presents a possible model of these new practices.</p> |
| <p>Energy Medicine East and West: A Natural History of Qi provides a unique, comprehensive overview of Qi or bioenergy for students and practitioners of energy medicines, Chinese and Oriental Medicine, and all disciplines of Complementary and Integrative Medicine. Mayor and Micozzi start with a comparative historical account of the ancient concepts of Qi and vital energy before covering theories of Qi, a discussion of the organized therapeutic modalities based upon Qi and its applications to specific health and medical conditions. Contributions are included from international experts in the field. The book moves from anatomical and bioenergetic complementarity of Western vital energy and Eastern Qi, through convergence of perspectives and models to demonstrations of how the traditional therapies are being melded together in a new, original and creative synthesis. David Mayor and Marc Micozzi are experienced medical practitioners, authors and editors. David Mayor has been actively involved in bioenergy research, practice and publishing for over 30 years, and is author/editor of <i>Electroacupuncture: A practical manual and resource</i> (2007), as well as other acupuncture texts and studies. Marc Micozzi is Professor in the Department of Physiology and Biophysics at Georgetown University School of Medicine, Washington, DC. As author/editor of <i>Fundamentals of Complementary & Alternative Medicine</i>, 4E (2011), and 25 other books, he has been writing, editing and teaching on bioenergy, Qi and related topics for 20 years. Endorsements "This wonderful book has assembled some 25 authors expressing well a view of qi which entirely does justice to its nature. Meticulously referenced, it is a milestone to set beside Maciocias Foundations of Chinese Medicine and Deadmans Manual of Acupuncture. Here at last are the beginnings of a true science of qi...There is truly nothing like it in contemporary literature. Alone, it lays the foundation for the beginnings of a modern science of qi."Richard Bertschinger, Acupuncturist and translator, Somerset, UK. "This book offers a timely and thorough examination of the experience and nature of qi, including a series of fascinating philosophical discussions with a direct application to our patients. Required reading for acupuncture practitioners seeking to justify and clarify their clinical reasoning."Val Hopwood PhD FCPs, Physiotherapist, acupuncturist, researcher and educator; Course director, MSC Acupuncture, Coventry University, UK. "Over the last decade most books on Asian medicine paid tribute to the aura of evidence-based medicine – experience counted little, RCTs were convincing. This book, at last, returns to an old tradition of debate, opening up quite a few new horizons. Reading it, my striving for knowledge was married with enjoyment and happiness. This book made me happy!" Thomas Ots MD PhD, Medical acupuncturist specialising in psychiatry, Graz, Austria; Editor-in-Chief, Deutsche Zeitschrift für Akupunktur. "To simply review the chapter headings is to know the truly remarkable expanse of this book...a wonderful bridge between the mysteries of the East and the sciences of the West...well documented, well written, and enlarging both. Enlightening...nicely depicts outstanding advances in energy psychotherapeutics, thus ultimately helping to move forward the human condition."Maurie D Pressman MD, Emeritus Clinical Professor of Psychiatry, Temple University School of Medicine, Philadelphia, PA; Emeritus Chairman of Psychiatry, Albert Einstein Medical Center, Philadelphia PA; past President, International Society for the Study of Subtle Energies and Energy Medicine, Lafayette, CO, USA.</p> |
| <p>"This is a wonderful volume, powerfully written, timely, insightful, and filled with major pieces; the passion, intellectual rigor and sense of history found here promises to shape this field in the decades to come. This volume sets the agenda for the future' - Norman K Denzin, University of Illinois Pathology and the Postmodern explores the relationship between mental distress and social constructionism using new work from eminent scholars in the fields of sociology, psychology and philosophy. The authors address: how specific cultural, economic and historical forces converge in contemporary psychiatry and psychology; how new syndromes, subjectivities and identities are being constructed and</p> |
| <p>The idea of using nature to improve mental and emotional wellbeing has existed for many years, in many forms. However, growing levels of interest in holistic, reciprocal relationships with nature have led to the development of an explicit field, termed Ecotherapy. In this thought-provoking new book, Martin Jordan and Joe Hinds provide a comprehensive exploration of this emerging area of practice. Divided into three parts, the book offers a unique examination of a range of theoretical perspectives, unpacks the latest research and provides a wealth of illuminating practice examples, with a number of chapters dedicated to authors' own first-hand experiences of the positive psychological effects of having contact with nature. Topics covered include: • The foundations of ecotherapy, including how it can be defined, its relation to psychotherapy and ecopsychology, and the research and various theory bases that inform it • The benefits of incorporating nature into palliative care • Nature as a tool for crisis recovery • Nature-based therapy for stress-related disorders • The use of nature to promote optimal functioning, with a focus on areas such as generative experiences, emotional development and exploration, autonomy and a sense of belonging. Written by a collection of leading experts from around the globe, Ecotherapy is a vital introduction to this fast-developing area of therapeutic practice.</p> |
| <p>This book is about the invisible or subtle nature of food and farming, and also about the nature of existence. Everything that we know (and do not know) about the physical world has a subtle counterpart which has been scarcely considered in modernist farming practice and research. If you think this book isn't for you, if it appears more important to attend to the pressing physical challenges the world is facing before having the luxury of turning to such subtleties, then think again. For it could be precisely this worldview – the one prioritises the physical-material dimension of reality - that helped get us into this situation in the first place. Perhaps we need a different worldview to get us out? This book makes a foundational contribution to the discipline of Subtle Agroecologies, a nexus of indigenous epistemologies, multidisciplinary advances in wave-based and ethereal studies, and the science of sustainable agriculture. Not a farming system in itself, Subtle Agroecologies superimposes a non-material dimension upon existing, materially-based agroecological farming systems. Bringing together 43 authors from 12 countries and five continents, from the natural and social sciences as well as the arts and humanities, this multi-contributed book introduces the discipline, explaining its relevance and potential contribution to the field of Agroecology. Research into Subtle Agroecologies may be described as the systematic study of the nature of the invisible world as it relates to the practice of agriculture, and to do this through adapting and innovating with research methods, in particular with those of a more embodied nature, with the overall purpose of bringing and maintaining balance and harmony. Such research is an open-minded inquiry, its grounding being the lived experiences of humans working on, and with, the land over several thousand years to the present. By reclaiming and reinterpreting the perennial relationship between humans and nature, the implications would revolutionise agriculture, heralding a new wave of more sustainable farming techniques, changing our whole relationship with nature to one of real collaboration rather than control, and ultimately transforming ourselves.</p> |
| <p>In the 14 years since Sierra Club Books published Theodore Roszak, Mary E. Gomes, and Allen D. Kanner's groundbreaking anthology, Ecopsychology: Restoring the Earth, Healing the Mind, the editors of this new volume have often been asked: Where can I find out more about the psyche-world connection? How can I do hands-on work in this area? Ecotherapy was compiled to answer these and other urgent questions. Ecotherapy, or applied ecopsychology, encompasses a broad range of nature-based methods of psychological healing, grounded in the crucial fact that people are inseparable from the rest of nature and nurtured by healthy interaction with the Earth. Leaders in the field, including Robert Greenway, and Mary Watkins, contribute essays that take into account the latest scientific understandings and the deepest indigenous wisdom. Other key thinkers, from Bill McKibben to Richard Louv to Joanna Macy, explore the links among ecotherapy, spiritual development, and restoring community. As mental-health professionals find themselves challenged to provide hard evidence that their practices actually work, and as costs for traditional modes of psychotherapy rise rapidly out of sight, this book offers practitioners and interested lay readers alike a spectrum of safe, effective alternative approaches backed by a growing body of research.</p> |
| <p>The premise of this book is that our environmental dilemmas are products of biological and sociocultural evolution, and that through an understanding of evolution we can reframe debates of thought and action. The purpose is to explain the wide variety of environmental worldviews, their origins, commonalities, points of contention, and their implications for the modern environmental movement. In three parts covering the origins, evolution and future of environmentalism, it offers instructors and students a framework on which to map theory, case studies and classical literature. It is shown that environmentalism can be described in terms of six human values—utility, stability, equity, beauty, sanctity, and morality—and that these are deeply rooted in our biological and cultural origins. In building this case the book draws upon ecology, philosophy, psychology, history, biology, economics, spirituality, and aesthetics, but rather than consider these all independently it integrates them to craft a mosaic narrative of our species and its home. From our evolutionary origins a story emerges; it is the story of humankind, how we have come to threaten our own existence, and why we seem to have such difficulty in acting together to ensure our common future. Understanding our environmental problems in evolutionary terms gives us a way forward. It suggests an environmentalism in which material views of human life include spirituality, in which our anthropocentric behaviors incorporate ecological function, and in which environmental problems are addressed by the intentional relation of humans to the nonhuman world and to one another. Aimed at students taking courses in environmental studies, the book brings clarity to a complex and, at times, confusing array of ideas and concepts of environmentalism.</p> |
