"With a new foreword by Frederick L. Kirschenmann..."

"A compelling agricultural story skillfully told; environmentalists will eat it up." - Kirkus Reviews When Bob Quinn was a kid, a stranger at a county fair gave him a few kernels of an unusual grain. Years later, it would become the centerpiece of his multimillion dollar heirloom grain company, Kamut International. How Bob went from being a true believer in better farming through chemistry to a leading proponent of organics is the unlikely story of Grain by Grain. Along the way, readers will learn how ancient wheat can lower inflammation, how regenerative agriculture can bring back rural jobs, and how combining time-tested farming practices with modern science can point the way for the future of food.

"Sure to become a game-changing guide to the future of good food and healthy landscapes." —Dan Barber, chef and author of The Third Plate Prepare to set aside what you think you know about yourself and microbes. The Hidden Half of Nature reveals why good health—for people and for plants—depends on Earth’s smallest creatures. Restoring life to their barren yard and recovering from a health crisis, David R. Montgomery and Anne Biklé discover astounding parallels between the botanical world and our own bodies. From garden to gut, they show why cultivating beneficial microbiomes holds the key to transforming agriculture and medicine.

Montana author, Jim Moore, teaches many history lessons in his debut novel, Ride the Jawbone, which effectively transports the reader to central Montana’s ranching communities and the famous Jawbone Railroad as they were experienced at the turn of the twentieth century. Into this story of a young lawyer, T. C. Bruce, who is asked to defend an odious outcast that the citizens want to hang, author Moore weaves details about the way of life of ranchers and other citizens of that era. Richard A. Harlow employed much persuasion to finance his Montana Railroad from where it linked with the Northern Pacific at Lombard to the Musselshell River Valley. Because of Harlow’s ability to accomplish this task on the strength of his jawbone, people called it the Jawbone Railroad. In Jim Moore’s novel, the body of a young woman is allegedly thrown from this train after the murder was committed. The accused is a reprehensible trapper whom no established attorney in Montana wants to defend. T. C. Bruce is the son of a rancher who owns a large spread an easy horseback ride away from Two Dot, Montana. T. C. loves ranching and is torn between his father’s wish for him to take over the ranch and his mother’s insistence that he put his education to use and practice law. When the judge asks him to take on the role of defense attorney in the Jawbone murder case, his father encourages him to do so. Two young women who take an interest in the handsome T. C. add complication to the story.

Who controls what we eat? This book reveals how dominant corporations, from the supermarket to the seed industry, exert control over contemporary food systems. It analyzes the strategies these firms are using to reshape society in order to further increase their power, particularly in terms of their bearing upon the more vulnerable sections of society, such as recent immigrants, ethnic minorities and those of lower socioeconomic status. Yet this study also shows that these trends are not inevitable. Opposed by numerous efforts, from microbreweries to seed saving networks, it explores how opposition to this has encouraged even the most powerful firms to make small but positive changes. This revised edition has been updated to reflect recent developments in the food system, as well as the broad political economic forces that shape them. It also examines the rapidly changing technologies, such as Big Data and automation, which have the potential to reinforce, as well as to challenge, the power of the largest firms.

Finalist for the PEN/E. O. Wilson Literary Science Writing Award “A call to action that underscores a common goal: to change the world from the ground up.”—Dan Barber, author of The Third Plate For centuries, agricultural practices have eroded the soil that farming depends on, stripping it of the organic matter vital to its productivity. Now conventional agriculture is threatening disaster for the world’s growing population. In Growing a Revolution, geologist David R. Montgomery travels the world, meeting farmers at the forefront of an agricultural movement to restore soil health. From Kansas to Ghana, he sees why adopting the three tenets of conservation agriculture—ditching the plow, planting cover crops, and growing a diversity of crops—is the solution. When farmers restore fertility to the land, this helps feed the world, cool the planet, reduce pollution, and return profitability to family farms.

Among others, food sovereignty, sustainable development and fair trade are the focus of a large number of social movements found in countries such as Bolivia, Mexico and Brazil. The contributors to this book include academic researchers as well as social movement leaders who are seeking to effect change in their countries and communities.

In Farmacology, practicing family physician and renowned nutrition explorer Daphne Miller brings us beyond the simple concept of “food as medicine” and introduces us to the critical idea that it’s the farm where that food is grown that offers us the real medicine. By venturing out of her clinic and spending time on seven family farms, Miller uncovers all the aspects of farming—from seed choice to soil management—that have a direct and powerful impact on our health. Bridging the traditional divide between agriculture and medicine, Miller shares lessons learned from inspiring farmers and biomedical researchers and artfully weaves their insights and discoveries, along with stories from her patients, into the narrative. The result is a compelling new vision for sustainable healing and a treasure trove of farm-to-body lessons that have immense value in our daily lives. In Farmacology you will meet: a vegetable farmer in Washington State who shows us how the principles he uses to rejuvenate his soil apply just as well to our own bodies. Here we also discover the direct links between healthy soil and healthy humans. a beef farmer in Missouri who shows how a holistic cattle-grazing method can grow resilient calves and resilient children. an egg farmer in Arkansas who introduces us to the counterintuitive idea that stress can keep us productive and healthy. We discover why the stressors associated with a pasture-based farming system are beneficial to animals and humans while the duress of factory farming can make us ill. a vintner in Sonoma, California, who reveals the principles of Integrated Pest Management and helps us understand how this gentler approach to controlling unwanted bugs and weeds might be used to treat invasive cancers in humans. a farmer in the Bronx who shows us how a network of gardens offers health benefits that extend far beyond the nutrient value of the fruits and vegetables grown in the raised beds. For example, did you know that urban farming can lower the incidence of alcoholism and crime? finally, an aromatic herb farmer in Washington State who teaches us about the secret chemical messages we exchange with plants—messages that can affect our mood and even keep us looking youthful. In each chapter, Farmacology reveals the surprising ways that the ecology of our body and the ecology of our farms are intimately linked. This is a paradigm-changing adventure that has huge implications for our personal health and the health of the planet.

Drawing on the theories of author and conservationist Wendell Berry for the field of EcoJustice Education, this book articulates a pedagogy of responsibility as a three-pronged approach grounded in the recognition that our planet balances an essential and fragile interdependence between all living creatures. Examining the deep cultural roots of social and ecological problems perpetuated by schools and institutions, Martusewicz identifies practices, relationships, beliefs, and traditions that contribute to healthier communities. She calls for imaginative re-thinking of education as an ethical process based in a vision of healthy, just, and sustainable communities. Using a critical analytical process, Martusewicz reveals how values of exploitation, mastery, and dispossession of land and people have taken hold in our educational system and communities, and employs Berry’s philosophy and wisdom to interrogate and develop a "pedagogy of responsibility" as an antidote to such harmful ideologies, structures, and patterns. Berry’s critical work and the author’s relatable storytelling challenge taken-for-granted perspectives and open new ways of thinking about teaching for democratic and sustainable communities.
