Object Oriented Programming. Python is a multi-paradigm programming language. It supports different programming approaches. One of the popular approaches to solve a programming problem is by creating objects. This is known as Object-Oriented Programming (OOP). An object has two characteristics: attributes; behavior; Let's take an example:

**Python Object Oriented Programming**

C++ and Python are languages that support object-oriented programming, but don't force the use of object-oriented features. Functional programming decomposes a problem into a set of functions. Ideally, functions only take inputs and produce outputs, and don't have any internal state that affects the output produced for a given input.
